Protect your business and minimize risk.

It only takes one age verification error in the sale of alcohol, tobacco, and other age restricted products for a retailer to face penalties that could threaten the reputation or even the future of a business.

To protect businesses from age verification infractions, Code has designed reliable, easy-to-use solutions that leverage Code's unique knowledge of the marketplace and long-term relationships with government agencies.

With accurate, on-the-spot reading of government issued barcoded identification, the CR3600AV and CR5000AV are stand-alone solutions that do not require a PC or manual management of data to alert a clerk of an underage patron.

Both solutions can be configured to process numerous age restricted products with varied legal age requirements, and both products have been programmed to comply with the various state requirements for consumer data management.

Multiple scenarios. Endless configuration options.

To maximize their productivity, Code's age verification solutions can be integrated into advanced data capture applications to populate loyalty form applications, customer queries, inventory management workflows, and more.

Integrating data is as easy as clicking the 'Driver License/Identification Configurator' tab in CortexTools[®], Code's user-friendly reader configuration software. By selecting the required identification data fields found in a driver license or military ID, administrators can quickly customize the reader output to meet the formatting needs of an application, regardless of the industry. This flexibility means Code's readers do more than simple age verification: they give customers the power to drive multiple workflows and processes in their establishments without having to invest in multiple products.

Code's age verification solutions are future-proof investments and the most cost-effective solutions available on the market today.

CR3600AV

FEATURES & BENEFITS

- Reads all AAMVA-compliant barcoded Driver Licenses
- Does not require a PC or manual management of data
- Displays patron's age on color display screen
- Audible tone alerts user of underage patron
- Up to four programmable minimum age categories
- Integrates into POS, loyalty, and inventory workflows
- Quickly reads barcodes from mobile device screens
- Transmits data via Bluetooth connection
- Communicates to printers, tablets and other Bluetooth-enabled devices
- Available in palm or handled configurations

CR5000AV

FEATURES & BENEFITS

- Reads all AAMVA-compliant barcoded Driver Licenses
- Does not require a PC or manual management of data
- Audible tone alerts user of underage patron
- May be configured for primary and secondary minimum ages
- Integrates into POS, loyalty, and inventory workflows
- Quickly reads barcodes from mobile device screens
- Tethered via Code's USB or RS232 Affinity® cables
- Communicates to Bluetooth-enabled devices, via Code's T500 Bluetooth cable
