

DRIVER LICENSE FORMATTING

Features & Benefits

- Driver license formatting can be done with any Code barcode reader; wireless or cabled
- CortexTools[®] driver license configurator feature easily allows users to select which fields to format from driver licenses and military ID for population into an application
- CortexTools[®] configuration software is free!

Applications

Retail Loyalty Forms

Credit Card Applications

Law Enforcement Applications

Age Verification

Driver license data in one quick scan.

A driver license barcode is a powerful resource for personal information. Though this information is encoded differently from state to state, Code's barcode reading technology makes sense of it. By decoding and formatting this data for integration into applications from retail to law enforcement, Code barcode readers will reduce data entry errors and increase workflow efficiency.

Custom data formatting.

Integrating data is as easy as clicking the 'Driver License/Identification' tab in CortexTools[®], Code's user-friendly reader configuration software. By selecting the required identification data fields found in a driver license or military ID, administrators can quickly customize the reader output to meet the formatting needs of an application, regardless of the industry.

This formatting versatility makes Code readers ideal for deployment in applications that improve customer engagement, monitor sales of age-restricted products, reduce 'at risk' roadside time of law enforcement officers and lowers patient registration wait times.

The formatting and integration possibilities are endless when you pair a Code reader with a Driver License/Identification Formatting license.
